MECHANICS OF THE PROGRAM	*Poor* *2 pts*	*Fair* *5 pts*	*Good* *8 pts*	*Enter SUBTOTAL*
Knowledge	Poor Displays knowledge of only the most basic functions in Java.	Fair Demonstrates knowledge of more complex functions in Java.	Good Uses both basic and complex functions in conjunction with one another to create a decent program.	
Organization	Poor Program is extremely unorganized. It is difficult to understand what any particular portion does.	Fair Program is not necessarily well organized, but it is evident what each portion does.	Good Program is well organized, and comments describe what each major portion of the program does. Full points in this category can also be rewarded if the quality of the resulting program is such that one does not need to understand what a certain part of the code does.	
Problem Solving and Efficiency	Poor All problems are solved in an extremely roundabout manner, considering that much of the language was learned within the given time period.	Fair Some of the program is written rather efficiently, keeping in mind that much of the language was learned within the given time.	Good Most of the program is written in an efficient manner, keeping in mind that much of the language was learned within the given time.	
Effort	Poor Little to no effort was put into the programming. The programmer didn't even care.	Fair A moderate amount of effort was put into the program. However, the programmers didn't seem to care about the work.	Good Much thought was obviously put into the program. It was well crafted--and not done in a night.	
Originality	Poor	Fair Program is somewhat	Good	

	Program is not creative and very basic.	unimpressive. However, the programmers could have been more vigilant in pursuing the most interesting aspects.	Program is rather interesting and creative for 10 weeks work.	
Punctuality	Poor Project is handed in very late.	Fair Project is a day late.	Good Project is finished by the day it is due.	
			AVERAGE	
CODING	**Poor** **2 pts**	**Fair** **6 pts**	**Good** **10 pts**	**Enter SUBTOTAL**
Appropriate Data Types, Variables and commenting	Poor Data types not suitable, variables names are ambiguous, no or very little code comments	Fair Data types are appropriate and variables names lack clarity, fair code comments	Good Data types are appropriate with meaningful variable names and excellent resourceful comments	
Use of main Java concepts	Poor No use	Fair Fair use	Good Codes are appropriate and well done	
*Implementation of OOP JAVA concepts****	Poor No use	Fair Fair use	Good Codes are appropriate and well done	
Documentation	Poor Missing	Fair Fair done documentation	Good Well done documentation	
Presentation skills	Poor	Fair	Good	
Result	Poor	Fair	Good	

	Program is finished, but the usability and performance leave much to be desired.	Program works fairly well but lacks any sort of polish.	Program performs the desired function and does it well.	
			AVERAGE	
			GRAND TOTAL OF POINTS GAINED (max 18)	

*OOP concepts: Abstraction (abstract classes, interfaces), Encapsulation (data protection), Inheritance, Polymorphism (overloading and method overriding), Association, Exception handling, Instance list of different class objects (ArrayList/LinkedList), Inner/outer classes, also File handling implementation
